Fabricademy is a transdisciplinary course that focuses on new technologies applied to the textile field, from the fashion industry all the way to the upcoming wearable market

HOW IT WORKS

Fabricademy is a 6-month educational program that runs in selected laboratories across the world.

The program is structured in two phases:

3-month intensive learning: 13 weekly online classes by global experts and weekly local trainings and assignments guided by the local instructors.

3-month final project development, mentored by local instructors and advised by global experts.

During the whole program, students have full access and guidance to an equipped laboratory.

The program includes the free participation to the annual FabX Conference, taking place each year in a different location around the world.

Selected works from Fabricademy students will be showcased at international exhibitions.

PROGRAM

September to December
State of the art
Digital Bodies
Open Source Circular Fashion
Biochromes
E-textiles
BioFabricating materials
Computational Couture
Textile as Scaffold
Open source Hardware
Wearables

Implications and applications
Soft Robotics
Skin Electronics
January to March
Personal Project Development
Research
Concept
Planning workflow
Prototyping
Storytelling
Final presentations
